NAMIBIA CONSUMER PRICE INDEX BULLETIN

OCTOBER 2013

Mission, Vision and Core Values

MISSION STATEMENT

"In a coordinated manner, we produce and disseminate relevant, quality and timely statistics that are fit-for-purpose in accordance with international standards and best practice"

VISION STATEMENT

"Be a high performance institution in statistics delivery"

CORE VALUES

Performance
Integrity
Service focus
Transparency
Accuracy
Partnership

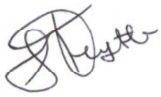
Preface

The Namibia Consumer Price Index (NCPI) encompasses all the expenditures on goods and services that Namibian private households make. It is compiled by comparing the prices of the goods and services of the month under review with the price of those goods and services in December 2012. More than 9000 prices of goods and services are collected on a monthly basis from more than 900 retail outlets in 8 localities.

The item indices are calculated as unweighted geometric averages of price ratios while the higher-level indices are calculated as weighted arithmetic averages of the item indices by using chained Laspeyres index number formulae. The NCPI weights represent the expenditure share of each commodity in the 2009/10 Namibia Household Income and Expenditure Survey. The Consumer Price Index is published about 15 days after the end of the reference month to which it relates.

The NCPI is used as the basis to calculate the rate of inflation as experienced by households in their role as consumers. The inflation rate measures the change in the NCPI of the month under review to the previous month (month-on-month change) as well as to the same month in the previous year (year-on-year change). The NCPI and the inflation rates are vital for purposes of economic policy-making, especially the conduct of monetary policy.

The inflation rate is used in a wide variety of public and private contracts for the purpose of adjusting payments (such as wages, rents, interest and social security benefits). It therefore, has substantial and wide-ranging financial implications for governments and businesses, as well as for households.



John Steytler
Statistician-General

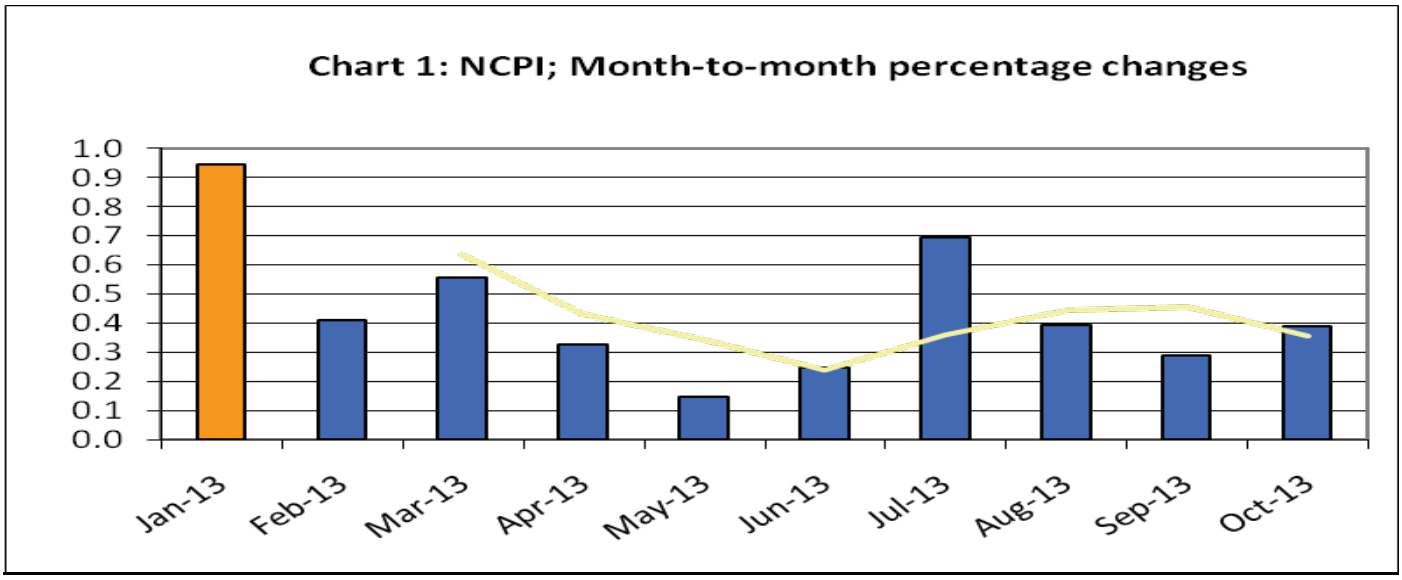
Revisions

The Namibia Statistics Agency (NSA) has taken the opportunity afforded by the current re-basing to correct a number of methodological defects and errors in the previously published CPI's. These were discovered when reviewing the index in connection with the work undertaken in the lead-up to re-basing. The NSA has made this decision as it believes that users are entitled to the best-available statistical information. NSA endeavours to publish correct data, if it is found that incorrect index has been published, every effort will be made to correct this error. This has led to a revision of the historical series, and the corresponding inflation rates. **Refer to Annex 1**

Readers are further informed that the annual inflation rates before December 2012 are based on weights derived from the 1993 /1994 NHIES (January 2002 to December 2012). They are chain-linked to the rebased series based on the 2009 /2010 NHIES basket which start from December 2012 to October 2013. When updating the weights and basket, the CPI requires that the old series be combined with the new ones with the reason of creating continuity in the CPI series. Cautioned should therefore be exercised when interpreting these series based on baskets derived from two different NHIES's.

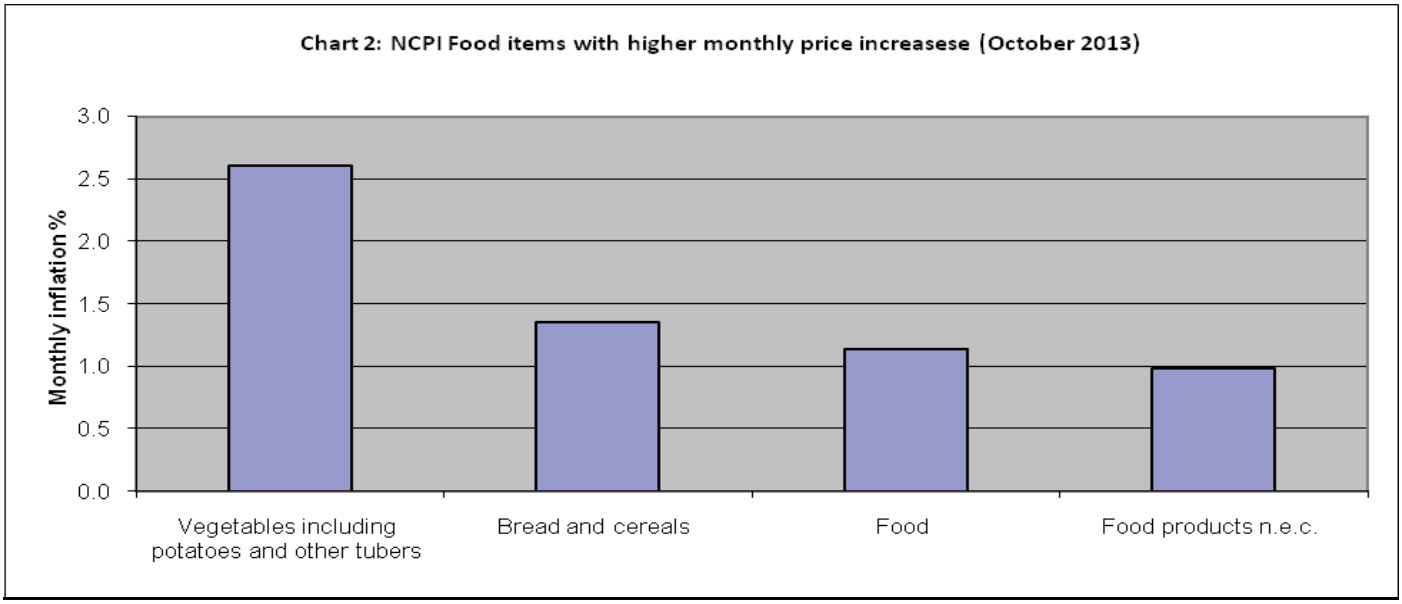
Summary Comments

The October 2013 All Items Index stood at 104.5 recording an increase of 0.4 percentage points from 104.1 registered a month earlier. The increase resulted from monthly increases recorded in all the groups comprising the Namibia CPI with the exception of Alcoholic beverages and tobacco and Hotels cafes and restaurants which recorded drops of 0.1 and 0.9 percent while the groups Housing, water, electricity, gas and other fuels and Furnishings, household equipments and routine maintenance of the house showed no change.



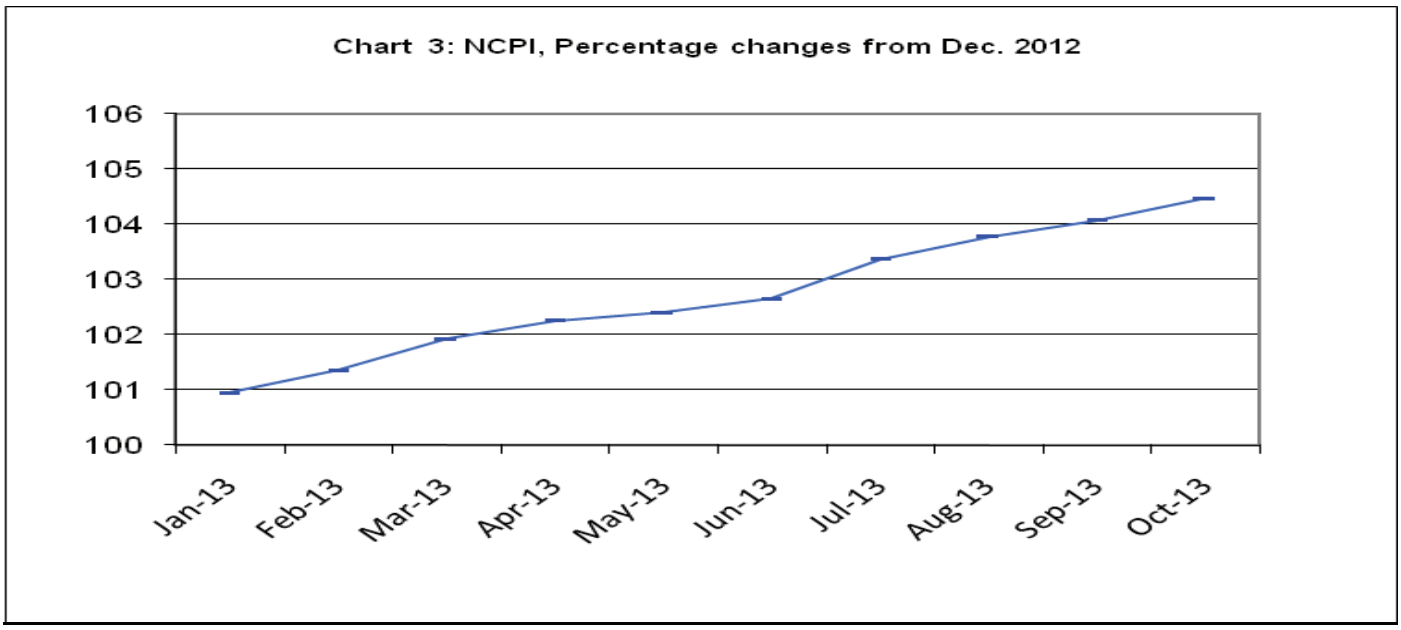
The Food and Non alcoholic beverages index for the month of October 2013 increased to 104.6 from 103.5 recorded in September 2013 resulting in a monthly increase of 1.1 percentage points. Significant increases in the sub components of vegetables including potatoes and other tubers (2.6 per cent), bread and cereals (1.4 percent), Food (1.1 per cent) and Food products not elsewhere classified (1.0 per cent) were the main driving forces on the Food and Non alcoholic beverages Index increase for October 2013.

The vegetables including potatoes and other tubers index for October 2013 stood at 107.7 as compared to 104.9 registered in September of the same year registering a monthly increase of about 2.8 percentage points.



Summary Comments

The All Items Index increased from 100 in December 2012 (base period) to 104.5 in October 2013 an increase of 4.5 percentage points.



The monthly inflation rate for the month of October 2013 for goods stood at 0.7 percent while for services recorded no changes. The increase in goods was caused by increases in the prices of vegetables including potatoes and other tubers (2.6 per cent), purchase of vehicles (2.5 per cent), operation of personal transport equipment (1.1 per cent), other major durables for recreation and culture (3.5 per cent) and Audio visual, photographic and data processing equipments (1.4 per cent).

The monthly inflation rates for the major groups comprising the Namibia CPI were Food and Non alcoholic beverages 1.0 per cent; Housing, water, electricity, gas and other fuels (showed no change), Alcoholic beverage and tobacco -0.1 per cent and Transport 1.2 per cent. The corresponding rates registered a month earlier all stood at 0.4 per cent except Alcoholic beverages and tobacco which registered no change. The average monthly inflation rates for the period January to October 2013 stood at 0.4 percent.

The detailed results of the Namibia CPI for the month of October 2013 are displayed in Tables 1-10 and in Charts 1-6 respectively on the following pages.
