

Chart 1: Livestock Marketed Index (Respective Month 2010 = 100)

The composite livestock marketed index for June 2014 stood at 83.1 points when compared to the level of 149.1 points recorded in June 2013, representing a decline of 44.3 per cent y/y. On a m/m basis, however, an increase of 1.2 percent was witnessed.

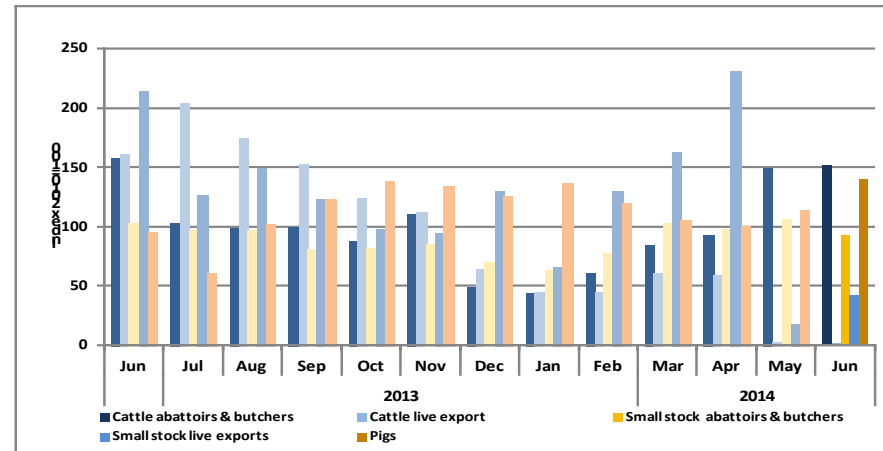

On average, the composite livestock marketed from January to June 2014 stood at 78.6 points when compared to the 130.8 points recorded during the same period in 2013. The notable difference in this regard was on account of abnormally high sales in 2013 due to a drought in Namibia, and abnormally low sales in 2014 on account of herd rebuilding following the 2013 sell-off.

The total number of livestock marketed in June 2014 stood at 105,743, a decline of 44.6 percent y/y and a decline of 1.1 percent on m/m basis.

(Chart 2) The index of live cattle export continued the downward trend seen over recent months and is now standing at 1.5 point; representing a decline of 99.1 percent on y/y, and 29.8 percent declined on m/m. This is largely on account of strict veterinary requirements introduced by South Africa on livestock imports in May 2014, which continues to negatively affect volumes of live export of livestock to the South African market from Namibia.

The composite livestock marketing index consists of four components: cattle and small stock sold to export abattoirs and butchers, cattle and Small Stock exported on-the-hoof and pigs.

Chart 2: Livestock Marketed Sub-Sector Index

The index of live export of small stock stood at 41.9 points, witnessing decline of 80.5 percent on y/y, compared to an increase of 136.2 percent m/m.

The composite index of cattle marketed through export abattoirs and butchers stood at 151.4 in June, an increase since February 2014 and 1.6 per cent increase on m/m; however a decline of 3.6 percent on y/y.

The composite of Small stock export to abattoir and butcher stood at 93.2 points, a declined of 24.4 percent m/m and a decline of 11.9 per cent y/y. The index of pigs stood at 140.6 points in June, an increase of 48.0 percent y/y and 22.2 percent m/m.

Methodology

Data Sources

The data are obtained from the Meat board of Namibia, data collected for monthly sectoral reports are monthly number of livestock marketed for: Live export to South Africa and Angola for both cattle, goat and sheep, Export to abattoirs and butchers (cattle, goats and sheep), and pigs

Base year

Livestock sectoral report is harmonised with the quarterly and annual national accounts base year 2010.

Calculations of index

The index is calculated based on the 2010 base year volumes and 2010 weights. The index is a magnitude of the volume changes over time, with reference to the volume of the base year 2010. The index is calculated based on volume changes of specific components, weighed as per the volume weights in 2010.
