ardap 2011 Census Regional Profile

2011 POPULATION AND HOUSING CENSUS

Hardap Regional Profile

Basic Analysis with Highlights

Foreword

The first Population and Housing Census in an independent Namibia was conducted in 1991. Since then, a Census has been undertaken every ten years, and the 2011 Population and Housing Census marks Namibia's third census since independence in 1990. The Census is demonstrative of the Namibia Statistics Agency's (NSA) commitment to providing relevant and quality statistics to support decision making, policy formulation and monitoring of development programmes.

This regional profile presents the result of the 2011 Namibia Population and Housing Census for the Hardap Region. The report provides a wide range of indicators on population characteristics, household and housing conditions and households enumerated in the region between 28 August and 15 September 2011. The report further provides detailed information on age and sex composition, marital status, education, literacy, economic activity, orphan-hood, fertility and disability. In addition, household size, housing amenities, ownership and the quality of housing are also presented in this report. All these indicators are provided at regional, urban/rural and constituency level. It should be noted that internal migration was not possible to calculate at constituency level. However it was provided at regional level in the 2011 main census report launched on 27 March 2013, as well as in the Population Atlas released in June 2013.

This regional profile is the fourth in a series of reports to be released based on the 2011 census data. The first report - released in April 2012 - disseminated provisional results on the distribution of the population. The second report was the census main report, which presented more detailed results at national levee; and the third report was the Population Atlas, which depicts the distribution of the country's population on maps by regions and constituencies.

We thank the Government of the Republic of Namibia for contributing significantly to the implementation of the 2011 census, as well as our development partners who provided technical or financial support. We are grateful to everyone who contributed to ensuring that the 2011 census was a success. In particular, we thank UNFPA, the Government of the United States of America through USAID and Statistics South Africa for their technical support to ensure the timely completion of census activities. We also thank the census inter-agency technical committee, line ministries, private institutions, the governor of the region and regional offices, field staff and the general public for their support, which was pivotal to the success of the 2011 Population & Housing Census.

We are hopeful that the users of this report will find its contents useful for their decision making and planning purposes, including business investments. Our commitment is to ensure that all statistics required by our users are readily available.

DR. JOHN STEYTLER STATISTICIAN GENERAL NAMIBIA STATISTICS AGENCY

CHAPTER 1: INTRODUCTION

1.1 Background

Hardap Region is one of the thirteen regions of Namibia and its capital is Mariental. The region stretches the entire width of Namibia from the Atlantic Ocean in the west to Namibia's eastern international border. In the northeast, it borders the Kgalagadi District of Botswana, and in the southeast, it borders South Africa's Northern Cape Province. Domestically, it borders the following regions: Erongo and Khomas in the north, Omaheke in the north east and Karas in the south. The Hardap region has 6 constituencies: Gibeon, Mariental Rural, Mariental Urban, Rehoboth Rural, Rehoboth Urban East, and Rehoboth Urban West.

1.2 The 2011 Population and Housing Census

The 2011 Namibia Population and Housing Census (PHC) results show that Hardap had a population of 79 507 people of which 38 935 were women and 40 572 were men. The population of Hardap grew at an annual rate of 1.5 percent between 2001 and 2011. Half of the population lived in urban areas (60%) compared to the 40% that lived in rural areas. This was largely explained by a large migration of the regional population from rural to urban areas in search of job opportunities particularly among young adults. The population is composed of 19 307 households, with an average household size of 4.0 persons per household.

This regional report provides more detailed findings in terms of the socio-economic, demographic, household and housing characteristics of the Hardap region as collected during the 2011 Census. Also, comparisons were made between the various census years as well as among urban/rural areas and constituencies within the region.

1.3 Organization of the report

The report is divided into seven main chapters, and a foreword and annexes are also included. Chapter 1 provides the background of the region. Chapter 2 provides information on population size, population structure and composition, sex ratios and population density. Chapter 3 presents information on marital status, citizenship and registration of births. Chapter 4 provides information on population trends, with a focus on population growth, fertility and household deaths. Chapter 5 addresses socio-economic characteristics of the population and mainly covers Information Communication Technology (ICT), literacy, education, disability, orphanhood and economic activity. Chapter 6 provides information on household characteristics including household size, household composition, main sources of income for the household, asset ownership, main language spoken at household level and agricultural activity. Chapter 7 provides information on housing characteristics and focuses on the types of housing units, tenure status, construction materials, water supply and sanitation as well as sources of energy for the household.

1.4 Please note that:

1. Chapter two (2) presents information for all persons including those who were in prisons, hotels and night travellers at the time of the Census. While chapters 3 - 7

present information obtained from all persons who were enumerated in households and institutional only.

- 2. Imputation using the hot-deck method was applied for 'Not stated' and 'Don't know' to age and sex of each person.
- 3. There are three Annexes: a Glossary of census terms, an Enumeration area map and detailed tables.

CHAPTER 2: POPULATION STRUCTURE, COMPOSITION AND DENSITY

This chapter provides information on population size, structure, composition and density of Hardap region. It also presents an analysis of population trends between the 1991, 2001 and 2011 Census years.

Total Population was 79 507

2.1 Population size and Density

Figure 2.1 provides a comparison of the population size by Census year and area. The results show that the total population for Kunene increased from 66 495 in 1991, to 68 249 in 2001. In 2011 it increased to 79 507 people. This trend is also observed in the urban areas, where the population increased consistently over the Census years.

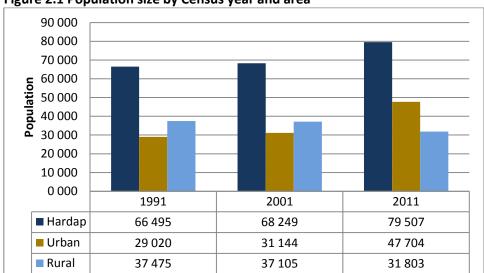

Figure 2.1 Population size by Census year and area

Population density is the average number of people per square kilometre. Thus, it shows the relationship between a given population and the size of the area in which they reside. Population densities calculated for all constituencies are given in Table 2.1.

Hardap had a low density of 0.7 people per one square kilometer (sq.km). This was due to the fact that the region is partly a desert, which has a dry/arid climate that makes it inhabitable by human beings. Only Rehoboth Rural and Rehoboth West Urban had a high population density of 25.3 and 34.4 persons per square kilometer respectively.

The population density of the Hardap Region was 0.7 persons per square kilometre

Table 2.1 Population density by area

Area	Population	Area in sg.km	Population density
Hardap	79 507	109 714	0.7
Gibeon	12 122	50 365	0.2
Mariental Rural	15 308	41 862	0.4
Mariental Urban	15 557	5 915	2.6
Rehoboth Rural	7 288	288	25.3
Rehoboth East Urban	18 035	10 959	1.6
Rehoboth West Urban	11 197	325	34.4

Table 2.2 shows the proportion of the population who lived in rural and urban areas as well as in the constituencies of Hardap region.

The table shows that the proportion of the population living in urban areas was higher than in rural areas (60% and 40% respectively). This is a change from 2001, when the rural population outnumbered the urban population. At constituency level, at the time of the 2011 Census, Rehoboth Urban East accommodated 22.7 percent of the total population and Rehoboth Rural the least with 9.2 percent.

About 60% of the Hardap Region's population lived in urban areas

Table 2.2 Percentage share of the population within the Census year and area

Area	Num	nber	Per	Percent		
Alea	2001	2011	2001	2011		
Hardap	68 249	79 507	100.0	100.0		
Urban	31 144	47 704	45.6	60.0		
Rural	37 105	31 803	54.4	40.0		
Gibeon	11 541	12 122	16.9	15.2		
Mariental Rural	13 946	15 308	20.4	19.3		
Mariental Urban	13 109	15 557	19.2	19.6		
Rehoboth Rural	7 524	7 288	11.0	9.2		
Rehoboth Urban East	12 891	18 035	18.9	22.7		
Rehoboth Urban West	9 238	11 197	13.5	14.1		

2.2 Population structure and composition

This sub-section provides information on the composition of the population in terms of sex and age, which are important demographic parameters.

2.2.1 Age groups

The age distribution of the population by broad age groups and areas is presented in Table 2.3. Hardap Region had a relatively young population, with 33 percent of the whole population being less than 15 years of age. The share of young people below the age of 15 years in rural areas was

33.4 percent, while that in urban areas was 32.8 percent. The elderly population aged 60 years and above in rural areas accounted for 9.0 percent, while in urban areas it was 7 percent.

Table 2.3 Population distribution by age group and area

Area	Population	0-4	10-14	15-59	60+
Hardap	79 507	11.9	21.1	59.2	7.8
Urban	47 814	11.9	20.9	60.2	7.0
Rural	31 693	12.0	21.4	57.6	9.0
Gibeon	12 122	12.3	22.5	55.4	9.8
Mariental Rural	15 308	12.8	22.7	56.8	7.6
Mariental Urban	15 557	11.7	20.7	62.3	5.3
Rehoboth Rural	7 288	11.8	21.0	55.4	11.8
Rehoboth Urban East	18 035	11.9	20.6	60.9	6.5
Rehoboth Urban West	11 197	10.7	18.8	61.9	8.6

2.2.2 Median age

Hardap region had a median age of 24 years

Median age is used as an indicator to determine whether the population is young, intermediate or old. A country/region is considered young when it has a median age of less than 20 years, while countries/regions with a median of 30 years and above is considered old. Populations with median ages between 20 and 29 are referred to as intermediate. Hardap region had a median age of 24 years, and is therefore considered intermediate.

Table 2.4 presents information on median age by sex, urban/rural areas and constituency level. The median age for both urban and rural areas was the same (24 years).

Table 2.4 Median age by sex and area

Area	Both	Female	Male
Aicu	sexes	Terriale	IVIGIC
Hardap	24	24	24
Urban	24	24	23
Rural	24	23	26
Gibeon	24	23	25
Mariental Rural	23	22	23
Mariental Urban	24	23	25
Rehoboth Rural	25	24	26
Rehoboth Urban East	23	24	22
Rehoboth Urban West	26	27	25

51% of the population was male

2.2.3 Sex composition

The 2011 census collected information on sex distribution of the region. Table 2.5 gives the population distribution by sex and constituency in Hardap region. The results show that males made up more than half of the population (51.0%). However more females were found in urban than in rural areas where the proportion of females was around 51 percent. Rehoboth Urban West constituency was characterised by a greater number of females (51.3%) compared to the regional average. The table further shows that a larger male population (55.8%) was found in Rehoboth Rural constituency compared to other constituencies of the region.

Table 2.5 Population distribution by sex and area

Area	Total	Female	Percent	Male	Percent
Hardap	79 507	38 935	49.0	40 572	51.0
Urban	47 814	24 531	51.3	23 283	48.7
Rural	31 693	14 404	45.4	17 289	54.6
Gibeon	12 122	5 833	48.1	6 289	51.9
Mariental Rural	15 308	7 439	48.6	7 869	51.4
Mariental Urban	15 557	7 506	48.2	8 051	51.8
Rehoboth Rural	7 288	3 221	44.2	4 067	55.8
Rehoboth Urban East	18 035	9 191	51.0	8 844	49.0
Rehoboth Urban West	11 197	5 745	51.3	5 452	48.7

On average there were 104 males for every 100

2.2.4 Sex ratio

Sex ratio is another measure of sex composition and is the proportion of males per 100 females in a given population.

Table 2.6 provides the sex ratio by urban and rural areas and constituencies. The sex ratio for Hardap region was 104, which implies that there were, on average, more males for every 100 females in this region. More males were recorded in rural areas (120) in 2011, and this trend was also observed in rural constituencies. This indicates a decline in the sex ratio of urban areas as more females migrated to towns during the last 10 years.

Table 2.6 Sex ratio by Census years and area

Area	2001	2011
Hardap	103	104
Urban	93	95
Rural	112	120
Gibeon	110	108
Mariental Rural	103	106
Mariental Urban	115	107
Rehoboth Rural	114	126
Rehoboth Urban East	91	96
Rehoboth Urban West	88	95

2.2.5 Age-sex pyramid

Age-sex pyramids provide important illustrations of the demographic characteristics of the population.

Figure 2.2 shows the population pyramid for Hardap. The pyramid indicates a broad base and a very narrow apex with a bulk in the middle ages. This indicates that the region had a relatively young population with more people in the middle age group and fewer at old age. The shape is a typical reflection of populations with high fertility and mortality rates.

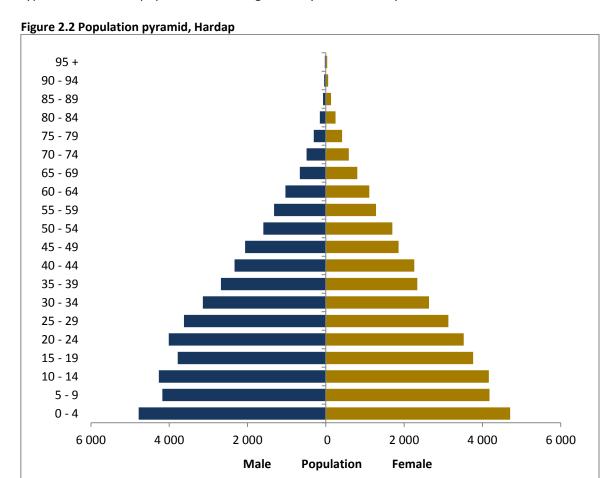

Figure 2.3 represents the population pyramid for urban areas of Hardap region in five-year age groups. The pyramid is bulky in the middle and has a relatively narrow apex indicating that urban areas have a large proportion of working-age people (between 15-59 years of age) and a much smaller proportion of elderly people.

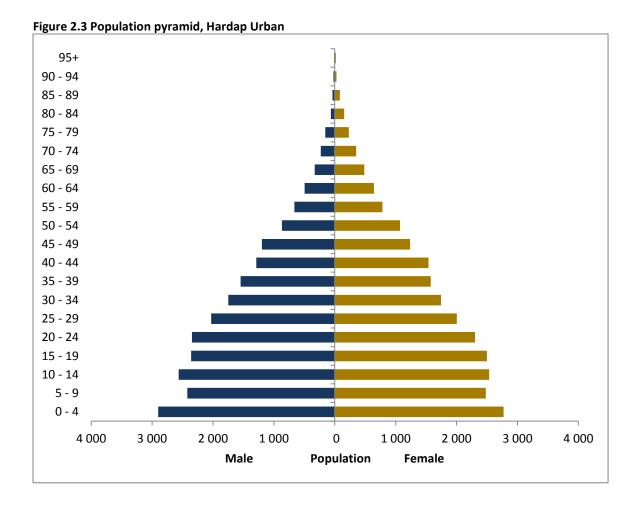

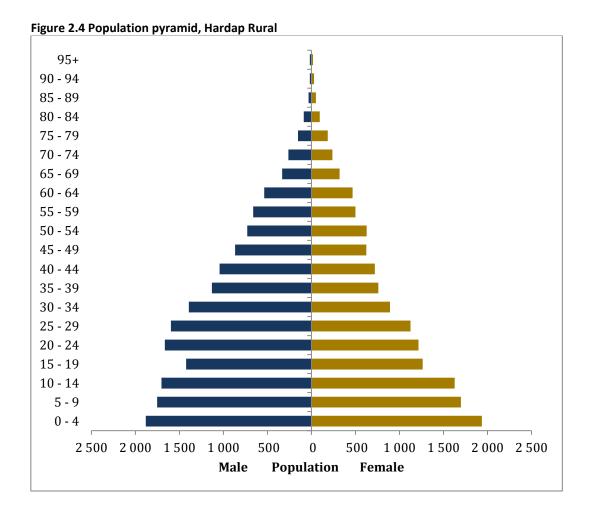

Figure 2.4 illustrates the pyramid for rural areas. The pyramid shows a broad base and a very narrow apex. However, a shrink is observed among the female age groups of 15 to 49 and this confirms the sex ratio results above, which show that more females migrated to urban areas in this region.

CHAPTER 3 POPULATION CHARACTERISTICS

This chapter provides information on demographic characteristics and focuses on marital status, citizenship and status of birth registration.

About 29 % of the population aged 15 years and above were married with certificates

3.1 Marital status

During the census, all people were asked to state their marital status in one of the following categories: never married; married with certificate; married traditionally; consensual union; divorced/separated; and widowed. For international comparisons the analysis focuses only on the population aged 15 years and above, although we acknowledge that there are cases of child marriage in Namibia.

Figure 3.1 illustrates that around 54.0 percent of population aged 15 years or older were never married. About 29.0 percent were married with certificates, 0.8 percent were traditionally married, and 10.2 percent were in a consensual union. The high number of people that were never married can be explained by the young population.

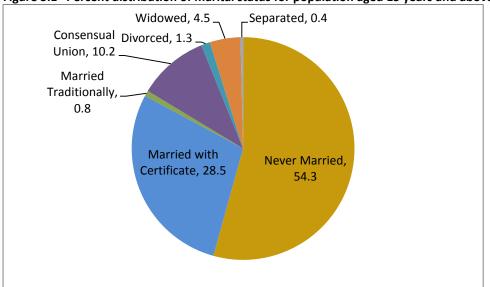

Figure 3.1 Percent distribution of marital status for population aged 15 years and above

3.2 Citizenship

The census asked all people to state their country of citizenship, from which the number of Namibians and non-Namibians is reported in Table 3.1. The table shows that the great majority of people enumerated (98.2%) in Hardap Region were Namibians.

Table 3.1 Population distribution by citizenship and sex

Citizenship	Total	Percent	Female	Percent	Male	Percent
Total	79 507	100.0	38 935	100.0	40 572	100.0
Namibians	78 058	98.2	38 279	98.3	39 779	98.0
Non-Namibians	1 448	1.8	655	1.7	793	2.0
Don't Know	1	0.0	1	0.0	0	0.0

Table 3.2 shows the distribution of non-Namibians by selected countries of origin, but it only lists countries of origin from which citizens constitute a substantial share of the total non-Namibian population.

European nationals represented the highest proportion of foreigners residing in Hardap region at 25 percent – an increase of 0.9 percent compared to 2001. Only 0.3 percent of non- Namibian nationals were from Botswana

Table 3.2 Non-citizen population by sex and country of origin

Citizonship		Population					
Citizenship	Total	Percent	Female	Percent	Male	Percent	
Total	1 448	100.0	655	100.0	793	100.0	
Angola	54	3.7	15	2.3	39	4.9	
Botswana	6	0.4	2	0.3	4	0.5	
South Africa	287	19.8	137	20.9	150	18.9	
Zambia	26	1.8	6	0.9	20	2.5	
Zimbabwe	175	12.1	75	11.5	100	12.6	
Other SADC Countries	231	16.0	94	14.4	137	17.3	
Other African Countries	220	15.2	103	15.7	117	14.8

American countries	30	2.1	13	2.0	17	2.1	
Asian And Oceanic Countries	56	3.9	19	2.9	37	4.7	

About 97 % of the Hardap Region's population had acquired birth certificates

3.3 Namibian Birth Registration

The Census collected information on whether or not the respondent was in possession of a Namibian birth registration certificate. Birth certificates are needed to access social services, such as social grants and educational services.

Table 3.3 below shows that 97.1 percent of the population possessed Namibian birth certificates. At constituency level, the highest proportion of people with birth certificates was in Rehoboth Urban West (98.4%), while the lowest was in Mariental Rural with 94.3 percent.

Table 3.3 Namibian birth certificate status by area

Area	Total	With birth certificate Without birt certificate			Don't	know	
		Number	Percent	Number	Percent	Number	Percent
Hardap	77 224	74 978	97.1	2 150	2.8	96	0.1
Urban	46 399	45 457	98	892	1.9	50	0.1
Rural	30 825	29 521	95.8	1 258	4.1	46	0.1
Gibeon	11 738	11 543	98.3	191	1.6	4	0
Mariental Rural	14 867	14 016	94.3	827	5.6	24	0.2
Mariental Urban	14 890	14 535	97.6	335	2.2	20	0.1
Rehoboth Rural	7 204	6 949	96.5	238	3.3	17	0.2
Rehoboth Urban East	17 536	17 119	97.6	390	2.2	27	0.2
Rehoboth Urban West	10 989	10 816	98.4	169	1.5	4	0

Note: The figures are for population in conventional and institutional households only

CHAPTER 4: POPULATION TRENDS

This chapter analyses population trends, including changes in population growth, fertility, and household deaths.

4.1 Population growth

The population of Hardap Region grew steadily since the 2001 Census. Table 4.1 provides population increase and annual growth rates between 2001 and 2011.

The annual growth rate for Hardap region between 2001 and 2011 was 1.5 percent. Furthermore, the annual growth rate for urban areas was 4.3 percent, however a negative growth rate (- 1.5%) was observed in rural areas due to high migration to urban areas. At constituency level, Rehoboth Urban East (3.4%) recorded the highest growth rate, while most of the constituencies recorded a growth rate below 2.0 percent between 2001 and 2011.

Table 4.1 Population change and annual growth rates for 2001-2011 by area

	Census year		Population	Annual
Area	2001	2011	change (2001- 2011)	growth rate (2001-2011)
Hardap	68 249	79 507	11 258	1.5
Urban	31 144	47 704	16 560	4.3
Rural	37 105	31 803	-5 302	-1.5
Gibeon	11 541	12 122	581	0.5
Mariental Rural	13 946	15 308	1 362	0.9
Mariental Urban	13 109	15 557	2 448	1.7
Rehoboth Rural	7 524	7 288	-236	-0.3
Rehoboth Urban East	12 891	18 035	5 144	3.4
Rehoboth Urban West	9 238	11 197	1 959	1.9

4.2 Fertility

The unadjusted crude birth rate was estimated

The Census collected information on live births from all women aged 15 - 49 years. Generally, indicators of fertility measure the frequency of child bearing in a given population. This section presents two indicators of fertility, namely: Crude Birth Rate (CBR) and Age at first birth for women aged 15 - 49 years, irrespective of their marital status.

4.2.1 Crude Birth Rate

The Crude Birth Rate (CBR) is the number of live births per 1 000 people of the total female and male population, per year. In 2011, there were 2 082 children born during the 12-months prior to the census date, which gives a reported or unadjusted CBR of 26.2 births per 1 000 people.

Table 4.2 indicates that the CBR was slightly higher in urban areas (27.5), compared to rural areas (24.2). At the constituency level, Rehoboth Urban East had the highest CBR of 30.6 births

per 1 000 people, while Rehoboth Urban West had the lowest CBR of 22.1 births per 1 000 people.

Table 4.2 Crude Birth Rates by area

Area	Population	Births in the last 12 months	CBR
Hardap	79 507	2 082	26.2
Urban	47 814	1 315	27.5
Rural	31 693	767	24.2
	12.122	202	22.2
Gibeon	12 122	283	23.3
Mariental Rural	15 308	411	26.8
Mariental Urban	15 557	425	27.3
Rehoboth Rural	7 288	165	22.6
Rehoboth Urban East	18 035	551	30.6
Rehoboth Urban West	11 197	247	22.1

4.2.2 Age at First Birth

Age at first birth influences the total number of births that a woman might have in her life, which has an impact on the size, composition, and future growth of the population.

Table 4.3 shows that the average age of mothers at first birth in Hardap region was 21 years. The same trend was observed in urban and rural areas. At constituency level, on average, mothers gave birth for the first time at the age of 21 years, with the exception of those in Rehoboth Urban West who, on average, delayed pregnancy until the age of 22 years.

Table 4.3 Average age of mother at first birth by area

Area	Average age at first birth
Hardap	21
Urban	21
Rural	21
Gibeon	21
Mariental Rural	21
Mariental Urban	21
Rehoboth Rural	21
Rehoboth Urban East	21
Rehoboth Urban West	22

4.3 Deaths in the household

Information on deaths in the last 12 months (September 2010 to August 2011) was collected from all households during the Census. If any deaths occurred in a household, households were asked to state whether the death was registered. Usually, mortality indicators are based on data from civil registration, but in Namibia this coverage is incomplete. It must also be acknowledged that information from surveys and censuses may be under-reported, which can lead to underestimations of the level of mortality.

4.3.1 Reported Deaths

Figure 4.1 presents the distribution of the reported deaths in the last 12 months by sex and urban/rural areas. A higher proportion of deaths were recorded for males (57.5%) than for females (42.5%). The figure shows that a greater proportion of men died in both urban and rural areas than women.

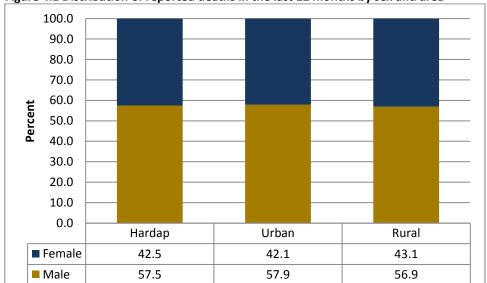

Figure 4.1 Distribution of reported deaths in the last 12 months by sex and area

4.3.2 Crude Death Rate

The crude death rate for Hardap Region was 13 per 1 000 people

1,033 deaths were reported for the 12

months prior to the census

Crude Death Rate (CDR) is defined as the number of deaths that occurred in a given calendar year per 1 000 people in the population.

Table 4.2 shows that in Hardap Region, a total of 1,033 deaths occurred during the last 12 months prior to the Census, which gives a CDR of 13 deaths per 1 000 people. The results further show that more deaths were reported in urban (CDR of 13 per 1,000 people) than rural areas (CDR of 12 per 1,000 people). At the constituency level, the highest death rates were in Rehoboth Rural and Rehoboth Urban East (CDR of 15 each) while the lowest rate was recorded in Mariental Urban (10).

Table 4.4 Number of reported deaths in the last 12 months and CDR by area

Area	Population	Number of reported deaths	CDR
Hardap	79 507	1 033	13
Urban	47 814	643	13
Rural	31 693	390	12
Gibeon	12 122	160	13
Mariental Rural	15 308	208	14
Mariental Urban	15 557	159	10
Rehoboth Rural	7 288	109	15
Rehoboth Urban East	18 035	267	15
Rehoboth Urban West	11 197	130	12

4.4.3 Death Registration

Table 4.5 shows that 98.4 percent of all reported deaths in the last 12 months prior to Census were registered. Rates of registration were about the same in both urban and rural areas (98.4% and 98.2% respectively).

At constituency level, Gibeon had the highest proportion of deaths registered with 99.4 percent while the lowest proportion of deaths registered was in Mariental Urban with 97.5 percent.

Table 4.5 Death registration status by area

Area	Total deaths reported	Total registered deaths	Percent registered
Hardap	1 033	1 016	98.4
Urban	643	633	98.4
Rural	390	383	98.2
Gibeon	160	159	99.4
Mariental Rural	208	205	98.6
Mariental Urban	159	155	97.5
Rehoboth Rural	109	107	98.2
Rehoboth Urban East	267	263	98.5
Rehoboth Urban West	130	127	97.7

CHAPTER 5: SOCIO-ECONOMIC CHARACTERISTICS OF THE POPULATION

This chapter deals with socio-economic characteristics of the population. The information discussed herein is crucial for decision making, and for the planning and monitoring of development programmes and policies. The sub-topics discussed include: Information Communication Technology (ICT), Early Childhood Development (ECD), Education and Literacy, Disability and Labour Force.

About 72 percent of the population in Hardap Region had access to a radio

5.1 Information and Communication Technology (ICT)

Information on the usage or access to ICT facilities was collected from people aged 3 years and above. This includes access to information and communication technology such as radio, television, computer, cell phone, telephone (fixed line), newspaper (daily/weekly) and internet (daily/weekly).

Figure 5.1 shows that the majority (71.8%) of people living in Hardap region had access to radio, with slightly more access in urban (76.1%) than rural areas (65.2%). Cell phones (55.8%) were more widespread across the region than fixed line telephones (10.6%). However, access to other modern information and communication technology such as internet was fairly limited, particularly so in rural areas.

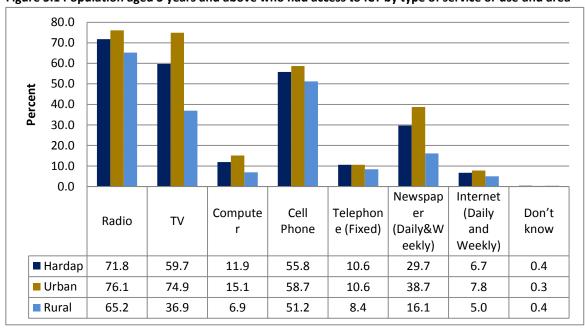

Figure 5.1 Population aged 3 years and above who had access to ICT by type of service or use and area

7.3 of children aged 0-4 years were attending Early Child Development programmes

5.2 Early Childhood Development (ECD)

Respondents were asked to state whether children aged 0-4 years attended any type of Early Childhood Development (ECD) services, such as Edu-care (day-care, crèche, kindergarten) and pre-primary school.

Table 5.1 shows that there were a total number of 9,438 children aged 0-4 years who were counted and out of this number, around 7 percent were attending ECD programmes. However, attendance in urban areas was much better, with 8.1 percent of children attending ECD facilities, while 6.2 percent attended in rural areas. Slightly more girls than boys were enrolled in ECD programmes in urban areas.

At a constituency level, the constituency with the highest proportion of children who were attending ECD programmes was Rehoboth Urban East (8.6%), while that with the lowest proportion was Gibeon (5.6%).

Table 5.1 Population aged 0-4 years attending ECD by sex, and area

Age	Childre	Children aged 0-4 Years			Attending ECD			Percent attending

Figure 5.2 shows the population aged 0-4 years attending ECD by type in urban and rural areas. Attendance in Edu- care programmes was higher (55.1%) than in pre-primary school (44.9%).

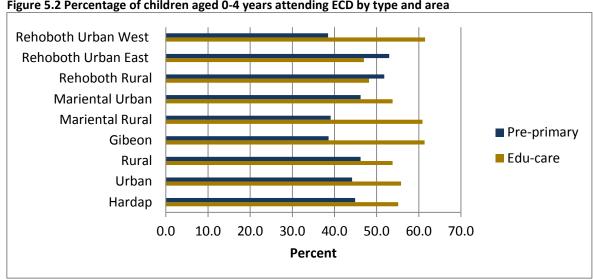

Figure 5.2 Percentage of children aged 0-4 years attending ECD by type and area

Close to 91% of persons aged 15 years and above in the Hardap Region were literate

5.3 Education and Literacy

Information on literacy and education is vital for many purposes, including the need for Government to articulate and monitor national development programs and goals. During the Census, specific information on education and literacy was collected from all people aged 5 years and above.

5.3.1 Literacy

Literacy can be defined as the ability to read and write with understanding in any language. All people aged 5 years and above were asked whether they can read and write in any language with understanding.

Table 5.2 provides information on literacy rates for the population aged 15 years and above. This table shows that the regional literacy rate was 91.1 percent. The literacy rate in urban areas stood at 93.8 percent, while in rural areas it stood at 86.8 percent. The table also shows that literacy was highest in Rehoboth Urban West (97.4%) and lowest in Rehoboth Rural (83.2%).

Table 5.2 Literate population aged 15 years and above by area and sex

Table 5.3 indicates that the literacy rate for youth aged 15 - 24 years in Kunene was 96.2 percent, with higher proportions of females (97.2%) than males (95.3%) being literate. The literacy rate was slightly higher in urban (97.9%) than in rural areas (95.9%). The literacy rate for young females in rural areas was 3.2 percentage points higher than males, while in urban areas the literacy rates were almost the same.

96% of the youth aged 15 to 24 years were literate

5.3.2 Formal Education

Formal education can be defined as full-time attendance at any regular educational institution, public or private, for systematic instruction. The categories of formal education used during the census were: pre-primary; primary schools; secondary or high schools; technical schools; agricultural institutions; teacher training college;, polytechnics and universities.

5.3.2.1 School Attendance

Table 5.4 shows that out of the population aged 6 years and above in Hardap region, 9.8 percent never attended school. A higher proportion of the population that never attended school was found in rural areas (14.2), compared to urban areas (6.9%).

The table indicates that there were slight differences between people who attended adult education programmes in urban and rural areas.

About 14% of the Hardap Region's rural population aged 6 years had never been to

Table 5.3 Percent distribution of school attendance for population 6 years and above by area

5.3.2.2 Educational Attainment

About 43% of persons aged 15 years and above completed their primary education before leaving school

Table 5.5 shows that about 43.0 percent of the population had completed their primary education and about 20.0 percent had completed their secondary education before leaving school, while 33.4 percent did not complete primary school. Only 2.7 percent of the population had completed their tertiary education.

Over 80% of children aged 7 to 15 years were enrolled in school

5.3.2.3 School Enrolment

Figure 5.3 shows the percentage of school enrolments for the school-going population between the ages of 5 and 24 years. Enrolment rates were highest for the ages of 7 to 15 years, exceeding 80 percent, but dropped after the age of 16 years. The highest enrolment rate was at age 8, where close to 93 and 91 percent of girls and boys respectively were enrolled at school. The lowest enrolment rate was at age 24 where only 2.1 percent of females and 1 percent of males were still enrolled. More girls than boys were enrolled until the age 18 years.

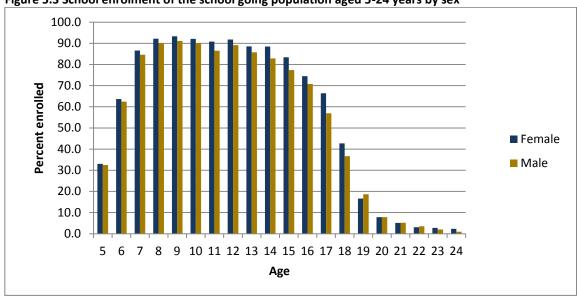

Figure 5.3 School enrolment of the school going population aged 5-24 years by sex

Table 5.6 presents school enrolment rates for urban and rural areas. The table shows that the enrolment rates were slightly higher in urban (59.3%) than rural areas (51.2%).

Figure 5.4 presents the school enrolment rate for the population aged 5 to 24 years by area. The results show that school enrolment was highest in Rehoboth Urban West, where it was close to 66 percent. By contrast, the lowest rate of enrolment was in Mariental Rural where less than 51 percent of the population age 5 to 24 years was enrolled at school.

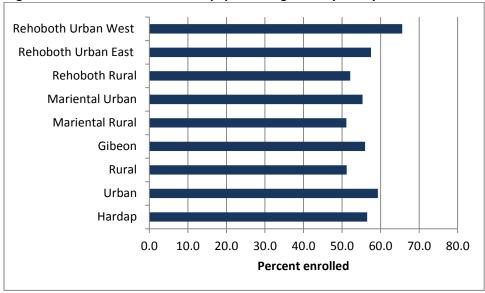

Figure 5.4 School enrolment rate for population aged 5-24 years by area

Primary school enrolment rates are presented in Table 5.7. The results show that overall, the enrolment rate was 89.4 percent for children aged 7 to 13 years old. The enrolment rate was higher in urban (92%) than in rural areas (86%). The results further indicate that more girls of this age group in rural areas were likely to enroll in school than boys. At constituency level, Rehoboth Urban West had the highest enrolment rate of about 96 percent while Mariental Urban had the lowest enrolment rate (85%).

89% of children aged 7 – 13 were enrolled in primary school

5.4 Disability

Disability is defined as a long-term physical, psychological or mental condition that limits a person from carrying out everyday activities at home, work or school. It may be present from birth or develop during a person's lifetime. Information on disability assists government in planning infrastructure, education systems and community awareness programmes amongst others.

During the Census, all persons in private households and institutions were asked about the types of long-term permanent disabilities or limitations that they had. Ten types of disabilities were identified for this purpose: blindness; visual impairment; deafness; hearing difficulties; muteness/dumbness; speech impairment; physical impairment of lower and upper limbs; mental disability; albinism and autism.

Table 5.8 indicates that 4.1 percent of the total population had disabilities. The proportion of people living with disabilities was the same in both rural and urban areas. Constituency figures show that Rehoboth Rural had the highest proportion of disabled people with 5.7 percent, while Rehoboth Urban West had the lowest proportion of disabled people with 3.5 percent.

4.1% of the population had disabilities

Table 5.8 Population with disability by sex and area

Table 5.9 shows that physical impairment of the lower limbs was the most common type of disability, affecting almost 27 percent of the population with disabilities. The least common type of disability was albinism, which was reported as affecting about 0.4 percent of people living with disabilities.

Table 5.11 shows that in Hardap Region, about 44 percent of the population with disabilities also had difficulty engaging in any learning and/or economic activity. There were slight differences between males and females in this respect, but a higher proportion of people with difficulties in engaging in learning and economic activities were observed in rural (45.9%) than urban areas (43.4%).

5.5 Orphanhood

10% of all children had lost one parent

Orphanhood is the condition of being less than 18 years of age, with one or both parents having died. Information on orphans was collected from all members of the household.

Table 5.13 shows that 8.2 percent of the population 18 years and below in Hardap region had lost one parent, while 2 percent had no parents. Orphanhood was more prevalent in both urban and rural areas.

The proportion of this population in Rehoboth Urban East who had lost one parent was was 11.0 percent and 2.6 percent for both parents, which is relatively high compared to other constituencies.

5.6 Economic Activity

During the Census enumeration, all people aged 8 years and above were asked about their economic activity within the seven days prior to the census reference night. The analysis presented below, however, only focuses on the population aged 15 years and above. Unlike the labour force survey, which gives detailed information on specific activities, the census only provides an overview of employment and economic activity.

The diagram in Figure 5.6 illustrates the composition and definition of the economically active and inactive population. The economically inactive population includes; students, homemakers and income recipients, while the economically active population is divided into unemployed and employed populations. The diagram shows that 70.5 percent of the population aged 15 years and above were economically active, 22.7 percent were economically inactive, and information for about 7 percent of the population was not stated.

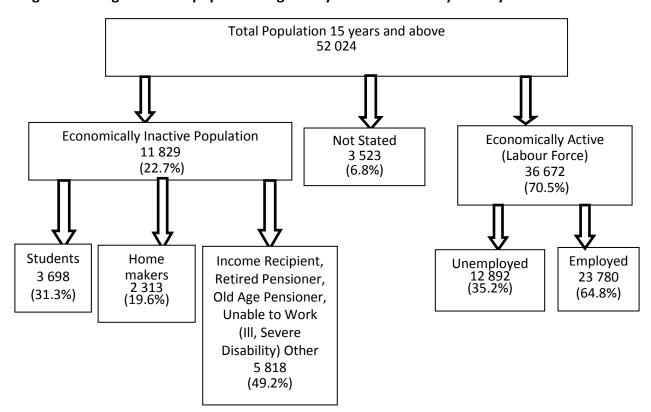

Figure 5.6 Diagram of the population aged 15 years and above by activity status

70.5% of the population aged 15 years and above was economically active

5.6.1 Economically Active Population

Table 5.14 shows that 64.8 percent of the economically active population aged 15 years and above were employed while 35.2 percent were unemployed. There were differences between urban and rural areas whereby 60.6 percent was employed in urban as compared to 71.5 percent in rural areas.

5.6.2 Labour Force

The labour force participation rate is the proportion of the economically active people in a given population group, which is calculated as the number of economically active population divided by the total population in the same population group.

Table 5.15 shows that the labour force participation rate for Hardap Region was 70.5 percent. The rate was higher for males (76.6%) than for females (64.1%). However, the labour force participation rate in urban areas (71.4%) was higher than in rural areas (69%). At the constituency level, the labour force participation rate was highest in Mariental Rural (73%) and lowest in Rehoboth Rural (66%).

Table 5.15 Labour Force Participation rate for population aged 15 years and above by sex and area

5.6.3 Population and Main Occupation

Elementary occupations made up the largest occupational group with 23.7%

Table 5.16 indicates the main occupation of those employed in Hardap region. Skilled Elementary occupations made up the largest occupation group with 23.7 percent, while the lowest was Armed Forces with only 0.4 percent in Hardap region. There were more significant differences between females and males among the top three occupational groups. However, skilled Agriculture and Fisheries were dominated by men (28.4%) compared to women (9.2%). On the other hand, more women worked in Elementary Occupations, Service work and Clerks than men.

5.6.4 Employment by Industry

Table 5.17 indicates the employed population by main industry and sex at regional level. Agriculture, Forestry and Fishing were the main industry (29.2%) of the work force followed by Construction (12.4%). Wholesale and Retail trade employed about 8.1 percent of the workforce.

Activities of private households, Administrative & Support services and Wholesale and Retail trade activities were clearly the domain of women, while men predominately worked in Agriculture, Forestry & Fishing as well as Construction.

5.6.5 Employment by Educational Attainment

Table 5.18 indicates that most of the employed people completed their primary education (36.6%). Furthermore, it is shown that about 1 out of 4 (23.6%) employed people completed secondary school. Women were better educated than men, on average, with about 29 percent of employed women having completed their secondary education and 5.0 percent their tertiary education, compared to about 20 percent and 4 percent for men respectively.

5.6.6 Main Job Undertaken

Table 5.19 shows that the private sector provided jobs for the largest proportion of employees (50.3%) in Hardap Region. The smallest proportion was other unpaid family workers and unpaid family worker (subsistence/communal) with 0.3 percent each. There were more women than men employed by the private sector, government and subsistence farming (without paid employees).

5.6.7 Unemployment

The unemployment rate is the proportion of unemployed people in the labour force for a given population group (i.e. the number of unemployed people divided by all people in the labour force in the same population group).

Figure 5.7 shows the distribution of unemployed people in terms of their level of educational attainment. At the time of the Census, about 47 percent of unemployed people had completed their primary education, 14.3 percent had completed their secondary education and only 0.5 percent had completed their tertiary education. Those with no formal education constituted around 9.1 percent of all unemployed people.

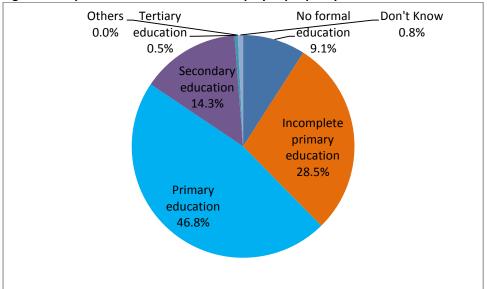

Figure 5.7 Population distributions of unemployed people by educational attainment

Table 5.20 shows that 24.2 percent of the unemployed population were actively looking for work. The proportion of females looking for work was higher than males (30.1% and 19.5% respectively). It can be observed that the proportion of job seekers in urban areas was higher than in rural areas (26.3% and 21% respectively).

The results further indicate that a higher proportion of unemployed females were actively looking for work than unemployed males in all constituencies with the exception of Rehoboth West Urban. A high proportion of job seekers were in Gibeon (27%), while Rehoboth West Urban had the lowest proportion of job seekers (19.8%).

Table 5.20 Unemployed population 15 years and above actively looking for a job by sex and area

5.7 Economically Inactive Population

Table 5.21 provides information on the economically inactive population. Students constituted the largest share (30.5%), while income recipients constituted the smallest portion with 1.5 percent. Women dominated the category of Homemakers (36.9%), while the proportion of economically inactive men was much higher in the categories of student and Old age Pensioner (36.2% and 27.1% respectively).

Table 5.21 presents information on the population of economically inactive people. Old-age Pensioners constituted the largest share (32.4%), while income recipients made up the smallest proportion, with 2.5 percent. Most men who were economically inactive fell into the category of Old Age Pensioner (58.4%), followed by students (40%). In the case of economically inactive women, most were old age pensioners (41.85), followed by Homemakers (40%) This pattern was also while the proportion of economically inactive women in this category was much lower (41.8%).

Table 5.21 Economically inactive population aged 15 years and above by activity status and sex

CHAPTER 6: HOUSEHOLD CHARACTERISTICS

This chapter presents information on household characteristics, particularly on household sizes, composition and income. Information on household assets, main languages spoken and agricultural activities are also outlined.

A household is defined as a group of people - related or unrelated - who live in the same dwelling unit and share or have common catering arrangements.

6.1 Household size

The average household size was 4.0 persons.

Table 6.1 shows that a household in Hardap Region consisted of 4.0 persons on average. However, the average household size was much lower in rural areas (3.7 persons) than in urban areas (slightly over 4 persons). Households in Rehoboth East Urban were the largest (4.3 persons). On the other hand, Rehoboth Rural had the smallest average household size of 3.3 persons in 2011.

Table 6.1 Average household size by Census year and area

Area	2001	2011

Rehoboth Rural	3.7	3.3
Rehoboth East Urban	4.6	4.3
Rehoboth West Urban	4.5	4.1

6.2 Household composition

The composition of households refers to the relationship of its members to the head of the household. Several categories of relationships were used to categorize household members, including spouse, son/daughter, grandchild, etc.

Sons and daughters of the head of the household accounted for about 28.8 percent of all relationships in Hardap region, while grandchildren (11.6%) and other relatives (6.4%) made up other significant portions of household membership. Only 9.7 percent of household members were spouses.

Table 6.2 Household population by sex and relationship to the head of household

Rehoboth East Urban	4 147	1 986	2 161	47.9	52.1	
Rehoboth West Urban	2 713	971	1 742	35.8	64.2	

6.2.2 Households Headed by Children and Orphans.

Households headed by children and orphans require the attention of Government and other stakeholders. Table 6.4 gives information on households which were headed by children and orphans aged 18 years old or younger. At the regional level 1.2 percent of all households in Hardap region were headed by children. The proportion of households headed by children in rural areas was 1.3 percent, slightly higher than the 1.2 percent in urban areas of the region.

Table 6.4 Percent distribution of Child and Orphan headed households by area

		Child	Orphan

Rehoboth West Urban	2 713	1.0	0.5

6.3 Household Income

Households were asked to state their main source of income, which included: farming; business activities (non-farming),; wages and salaries; old age pension; cash remittances; retirement fund; grants for orphans and people living with disabilities.

Table 6.5 shows that wages and salaries (64.2%) was the highest main source of income in Hardap region, while the least was orphans grants (0.6%). Both urban and rural areas (67% and 61% of the households respectively) reported wages and salaries as the main source of income. A similar trend was also observed at constituency level.

Table 6.5 Percent distribution of households' main source of income by area

6.4 Household assets

The ownership of assets is an important indicator of social welfare and living standards, and households that own certain assets have higher standards of living than those without. The Census collected data on a wide range of assets including cars, televisions, radios and mobile phones. These can be categorised into assets used for transportation and communication, and as domestic utilities, for example.

Table 6.6 presents information on communication assets. The results show that radio and mobile phones were the most commonly owned assets in Hardap region owned by 71.8 and 68.9 percent of the households respectively.

Only 3.5 percent of all households had internet connectivity from home.

Table 6.6 Percentage distribution of households owning selected communication assets by area

6.5 Language

Information on the main language spoken in the household was collected from all households. The results in Table 6.7 show that Nama/Damara languages were reported to have been spoken in most of the households (43.3%).

6.6 Agricultural Activity

Agriculture is defined in the population census as any activity directly related to the production or processing of crops, dairy products, poultry or livestock for commercial sale or as a principal means of personal subsistence. This is known as 'own-account' agriculture. Information was collected on the type of agricultural activities in which households engaged during the past 12 months prior to the Census. Where applicable, households could report more than one type of agricultural activity.

Table 6.8 provides information on households that were engaged in agricultural activities in Hardap region. At a regional level, livestock farming was most common; being reported by 19.4 percent of all households, while agro-processing was the least common agricultural activity, reported by only 0.2 percent of households. Livestock was the most common agricultural activity in urban/rural areas and all the constituencies in Hardap region, with the exception of Rehoboth East Urban.

CHAPTER 7: HOUSING CHARACTERISTICS

This Chapter presents analysis of the characteristics of housing, which includes all structures used as dwelling units. Aspects considered are the type of housing, tenure, materials used for building, housing utilities, sources of energy and water supply sanitation.

7.1 Type of housing

59.3% of all households resides in detached house

Nine types of housing units were defined in the census: detached house; semi-detached/townhouse; apartment/ flat; guest flat; part commercial/industrial; mobile home (caravan, tent); single quarters; traditional dwelling; and improvised housing unit (shack).

Table 7.1 indicates that detached housing units were the most common, and made up 59.3 percent of all household types in the Hardap Region. The traditional dwelling unit was the least common housing type with only 0.6 percent of households falling into this category. It is worth noting that 29 percent of the households in urban areas lived in improvised housing units/shacks. Detached housing units dominated in rural areas (63.0%) compared to urban areas (56.4%). At constituency level, detached and improvised housing units were the most common among all the constituencies in Hardap region followed by shacks.

Table 7.1 Percent distribution of households by type of housing unit and area

Area	Households	Detached House	Semi- Detached House	Apartment /Flat	Single Quarters	Traditional Dwelling	Improvised Housing Unit (Shack)	Other Housing unit
Hardap	19 307	59.3	9.2	3.7	0.9	0.6	24.7	1.7

Rehoboth West Urban	2 713	79.5	6.9	3.2	0.4	0.2	7.7	2.0

7.2 Type of Tenure

Tenure refers to the conditions which govern the rights of individuals to occupy dwelling units. The most frequent forms are tenancy (in which rent is paid to a landlord) and owner occupancy which can be subdivided into owner-occupier or mortgaged. In the case of tenancy, the landlord can be a private individual, non-profit organization such as a housing association, or a government body which provides public housing.

Table 7.2 shows that most housing units (48.9%) in the region were owned and occupied by households without a mortgage. These were more common in urban areas (52.0%) than rural areas

(44.8%). Housing units occupied by owners with mortgages were mainly found in urban areas (20.8%), and less so in rural areas (6.2%). This was because most dwellings in rural areas were traditional houses that did not have title deeds and cannot be mortgaged

Table 7.2 Percent distribution of households by type of tenure status by area

		Owner	Owner						
Area	Households	Occupied	Occupied	Rented	Rented	Rented

Rehoboth West Urban	2 713	37.5	33.8	1.0	1.5	3.6	13.3	8.8	0.6

7.3 Average number of persons per sleeping rooms

The Census collected information on the number of sleeping rooms per household, and the average number of people per sleeping room (or room occupancy). These figures serve as indicators of crowding.

Table 7.3 shows that the average number of persons per sleeping room was 1.8 persons, which suggests that most households were not overcrowded in Hardap Region. There were no major differences between urban and rural areas and across all the constituencies in this respect.

Table 7.3 Average number of persons per sleeping room by area

			Average

Rehoboth West Urban	11 130	7 516	1.5

7.4 Materials used for housing construction

This section presents information on the materials used to construct roofs, walls and floors of housing units, which are important indicators of the socio-economic conditions and welfare of households. Most of the materials used can be broadly divided between those that are harvested with labour from local resources (grass, sticks, mud and dung etc.) and those that are purchased with cash (for example: cement bricks, blocks, corrugated iron).

Table 7.4 shows that 61.2 percent of households in the Hardap Region reside in dwellings with walls made from cement/bricks in Hardap region. These were considered permanent/durable materials and an indicator of development. About 62.4 percent of urban households used cement/bricks for outer walls compared to 59.5 percent for rural households. At the constituency level, households with walls constructed from cement blocks/bricks/stones were predominant across all the constituencies in Hardap region followed by corrugated iron/zinc.

61.2% of households reside in dwellings with walls made from cement/bricks

With regards to material used for the floor, Table 7.6 shows that over 54 percent of the households in Hardap region had floors made from cement. It can be observed in both urban and rural areas that the most common material used for floors was cement (46% and 65% respectively). However, it can be noted that there was a significant number of households which had their floors made from sand/earth throughout the region. Urban households also made great use of tiles for flooring (26.5% urban households).

Table 7.6 Percent distribution of households by main material used for the floor and area

7.5 Sources of energy

Data collected from private households on energy for cooking, lighting and heating provide useful information on social conditions and development. This information is also valuable as a measure of Namibia's use of renewable (e.g. solar and wind power) and non-renewable (e.g. oil and coal) resources, and the environmental consequences of using different kinds of energy.

Table 7.7 indicates that about 49 percent of all the households in Hardap region relied on electricity from main grids as their main source of energy for cooking and about 45 percent relied on wood. Over 66 percent of urban households used electricity for cooking while 66 percent of households in rural areas used wood to cook. It can be noted that, about 28 percent of households in urban areas also used wood for cooking.

At constituency level, most of the urban areas depended on electricity from main grids for cooking, while all the rural constituencies relied on wood as their main source for cooking.

Table 7.7 Percent distribution of households by main source of energy for cooking by area

With respect to the sources of energy for lighting, the results indicated in Table 7.8 show that the most common source of energy for lighting in Hardap region was electricity from mains for 66.3 percent of the households. More than 81 percent of households in urban areas relied on electricity from mains, while a large proportion of the households in rural areas used candles (41%) for lighting. Solar energy was not widely used, but played a more important role in rural areas (3.8%) than in urban areas (0.1%). Electricity from mains for lighting dominated in Rehoboth West Urban (92.7%).

Second main source of energy for lighting was candles used by 26.4% of the households

7.6 Water Supply and Sanitation

This section covers the main source of water for drinking and cooking, type of toilet facilities, and disposal of waste or garbage for households. Poor sanitation and inadequate access to safe water are public health concerns because they create conditions conducive to the spread of diseases.

The results indicated in Table 7.9 show that 93.4 percent of the households in Hardap region had access to safe water. The results further show that about 96 percent of households in urban areas had access to safe water, more than in rural areas (90.5%). With regards to unsafe water, about 4.5 percent of households in rural areas relied on unprotected wells, boreholes with open tanks, rivers/dams/streams and canals as their main source of water for cooking/drinking.

Most of the households in this region have access to safe water (93.4%)

With respect to the type of main toilet facilities, the results indicated in Table 7.10 shows that close to 35 percent of the households in Hardap region had no toilet facilities and only 54.5 percent had access to flush toilets. There were notable differences between urban and rural areas. In urban areas about 55 percent of households used flush toilets while the corresponding rural percentage was only about 20.7 percent. At a constituency level, Rehoboth Rural had the highest proportion of households with no toilet facilities - close to 50 percent.

Close to 35% of the households had no toilet facility

7.7 Garbage and waste disposal

Table 7.11 shows that the most common means of disposing of garbage in the Hardap region was through regular collection of garbage, with 52.1 percent of households making use of this service.

In urban areas, about 76 percent of households benefitted from regular waste collection while close to 50 percent of households in rural areas burnt their waste.

Similarly, at constituency level, regular waste collection was most common in urban constituencies while the rural constituencies depended on burning as a means of disposing of their waste /garbage.

Glossary of Census terms

The concepts and classifications used in the 2011 Population and Housing Census are defined below. These concepts and classifications are based on regional and International recommendation with adaptations to suit local conditions.

Geographic Concepts

Hardap region consisted of 6 constituencies, namely Gibeon, Mariental Rural, Mariental Urban, Rehoboth Rural, Rehoboth East Urban and Rehoboth West Urban.

Locality

For the purpose of the Census, a locality is defined as a distinct population cluster, irrespective of size, in which people live and which has a name or locally recognized status.

Enumeration area

For the purpose of enumeration (census date collection/counting), the whole country was divided into small geographical areas of manageable sizes known as enumeration areas (EAs).

Dwelling unit

A dwelling unit is a unit of accommodation of a household that may be vacant or shared by more than one household.

Marital status

Is defined as the person's personal status in relation to the marriage laws or customs of the country

Live birth

A child born alive is one who cries after being born. Thus, a live birth is a birth which results in a child that shows any sign of life irrespective of the time or period within which these signs are manifested.

Early childhood development

This refers to children aged 0 - 4 years who were attending day-care, crèche, kindergarten and pre-primary school. The categories were as follows: Edu-care (day-care, crèche, kindergarten) and pre-primary school.

Literacy

This refers to the ability to read and write with understanding in any language. Those that could both read and write with understanding were classified as literate; and those who could only read but not write were classified as illiterate.

School attendance

This refers to full time attendance at any regular educational institution, public or private, for systematic instruction at any level of education.

Educational attainment

The highest standard, grade or years completed at the highest level of school, college or university attended.

Disability

This refers to a condition of loss of physical or mental function resulting in inability to perform daily activities. Disability is aggravated by physical, personal, and environmental barriers.

Occupation

This refers to the type of work, trade or profession performed by an individual during the Census reference period, irrespective of status in employment of the individual.

Industry

This refers to the main goods and/or services produced at the person's work place (if employed) or usual place of work (if on vacation, sick leave).

Employment status

This refers to the status of those employed during the reference period or those who were on sick/vacation leave and had a job to return to, in terms of either working/worked as employees, employers, own account workers, or unpaid family workers.

Household

A household consists of a person or a group of persons related or unrelated who lived together in the same homestead/compound but not necessarily in the same dwelling unit.

Head of household

The head of household is the person (of either sex) who is looked upon by the other members of the household as their leader or main decision-maker.

Children and orphan headed household

This refers to households headed by children/orphans aged 18 years and below. Orphans are children 18 years and below who during the time of the Census were orphaned by one or both parents.

Household assets

Ownership of assets is a good measure of the social well-fare and standard of living of households. Hence, households were also asked whether they owned certain assets, and the assets had to be in working condition. Assets included: car, motorbike, bicycle, radio, television, telephone (landline), telephone (mobile), computer/laptop, refrigerator/freezer, stove, microwave, etc.

Agricultural activities

This refers to activities such as the farming of crop, poultry, or livestock, agro processing and horticulture.

Housing unit

This refers to separate and independent living premises occupied by the household.

Tenure

This is the arrangement under which the household occupies all/or part of a housing unit. This looks at whether the housing unit was owner-occupied, rented or rent-free.

Number of sleeping rooms

These are all rooms used for sleeping purposes only, thus it excludes rooms such as study rooms, toilets, kitchens, passages etc. However if a room such as a garage was used for sleeping purposes it was considered a sleeping room.

Material used for outer-walls, floor and roof

This refers to the main material used for the construction of the household's housing unit. Materials may include cement blocks/bricks/stones, burnt/face bricks for outer-walls, or corrugated iron-sheets, brick tiles, concrete for roof, or sand/earth, cement, mud/clay for floor, etc.

Source of water for cooking and drinking

A measure of the well-being of Namibians is the proportion of households that have access to clean/potable water. This question referred to the main sources of water used by the households for cooking and drinking.

Source of energy for cooking, lighting and heating

This refers to the type of energy most often used for cooking, lighting and heating. The sources include electricity, gas, solar, wood, candle, charcoal, paraffin, etc.

Type of toilet facility

This information provides a measure of sanitation level of the household since these facilities are important for disease control and health improvement. This looked at whether the household used a private toilet connected to the main sewer, public toilet connected to the sewer, private toilet connected to septic tank, public toilet connected to septic, etc.

Garbage and refuse disposal

This information can be used in obtaining the hygiene level of the household since these facilities are important for disease control and health improvements.
