Total Expense Ratio (TER)	0.66%
Nature of Distributions	Interest
Income Declaration	Accrued Daily, Paid Monthly

Who Should Invest?

The Pointbreak Institutional Money Fund is suitable for investors seeking a low risk investment that maximises income. It offers a high income yield, capital stability and good liquidity.

Investment Objective

The fund's objective is to achieve an investment return in excess of general money market instruments and funds, while ensuring a high degree of liquidity, capital preservation and below average risk. The fund invests with the four major banking groups in Namibia, the five major banking groups in South Africa, Nampost Namibia and the Namibian, and South African Reserve Bank. Securities to be included in the portfolio consist of money market instruments, participatory interests in unit trust schemes, bank call and fixed deposits, fixed income securities, government bills and bonds, quality commercial paper and repurchase agreements.

Fund Commentary

During March global and local capital markets were driven by the Covid pandemic, and the resulting impact of countering monetary and fiscal stimulus. Bank of Namibia has followed the SARB with an aggressive 100bps cut in Repo Rate, easing policy and supplying liquidity to the market. A fiscal package amounting to N\$8.1bn (approx. 4% of GDP) has been proposed, of which we await a detailed funding plan.

The Namibian and South African money market curves followed the repo rate down, with a current NCD-spread of 40bps on the 12-month tenor. South African bonds weakened significantly in line with the Rand, as foreign investors sold-off emerging market assets. This was aggravated by the Moody's ratings downgrade of South African sovereign debt to junk status.

The fund is defensively positioned and will build up further liquidity. Given its duration and maturity profile, we expect a gradual decline in yield, which will remain attractive relative to call rates and inflation going forward.

Asset Allocation

Weighted Average Duration - 142 days
 Weighted Average Legal Maturity - 142 days

Collective Investment Schemes in Securities (unit trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. Unit Trust prices are calculated on a net asset value basis, which is the total capital value invested including any income accrual and less any permissible deductions from the portfolio divided by the number of units in issue. Income accruals are made daily and paid out monthly. Purchase and repurchase requests may be received by the manager by 10h00 each business day. Permissible deductions may include management fees, brokerage, NAMFISA levies, auditor's fees, bank charges, trustee fees and RSC levies. A schedule of fees and charges is available on request from Ashburton Unit Trust Management Company. Commission and incentives may be paid and if so, would be included in the overall costs.
